

Question/Issue

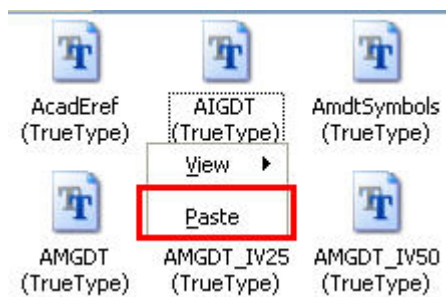

(Fonts, adding) Adding a TrueType font to Mastercam.

Answer/Solution

Mastercam uses whichever TrueType fonts are installed on the system. Simply put the TrueType font file (.TTF) in the C:\Windows\Fonts folder.

You can navigate through Windows Explorer or choose Start > Control Panel > Fonts.

Right-click in the Fonts folder and choose Paste.

The new font has been added to the system and can be used in Mastercam wherever TrueType fonts are available, such as Dimension and Note text and Letters.
