

Question/Issue

Operations manager: Full-screen window cannot be resized.

Answer/solution

If the Operations Manager window is opened to full screen and the edges cannot be accessed, you cannot resize the window. Without resizing the window, even if you re-dock it to its default position, it will resize to full screen the next time you move it.

Follow these steps:

1. Double-click the title bar at the top of the Operations Manager window to re-dock it to the default position.
2. Drag it to the Mastercam title bar. This gives you access to at least one side of the window.
3. Manually adjust the window.

Note: If dragging the window to the title bar makes the top of the window unreachable, minimize and restore the Mastercam window. The Operations Manager window will adjust.
