

Question/Issue

(Sim) **Error message:** Invalid SIM found-error code 2, EXE not valid

Cause: Hasp emulator

Answer/solution

V9

- Delete or rename the following files. **Hasp95.vxd** & **Hasp95DL.vxd**
These will be found in either the windows/system or windows system32 folder depending on the operating system.

X, X2

- First search the entire hard drive for the following file. If it is found go ahead and delete it. "**Haspm32**".
- If you still receive the same error when trying to start the software then you will need to clean the registry of any indications of the HASP Emulator. Start by looking in the Registry (in both HKEY_LOCAL_MACHINE & HKEY_CURRENT_USER) for **System\CurrentControlSet\Services\Emulator\HASP** and delete it.
- The attached file Emulaotr.txt contains additional entries emulator may install. There's a chance that some of these will need to be deleted too in order to completely eliminate the error but start off with the first two steps.

X3

- Everything listed under X,X2 as well as items listed below
- Search registry and delete any **XHasp** entries.
- Search and delete the following file **XHasp.sys**. It will typically be found in the *system* or *system32* folder.

Note: If all traces are not removed from the system, you may still get the error. At this point if the hasp emulator provider cannot supply you with a removal utility it may be necessary to format the hard drive.
